

Bristow Laser Systems, Australian Manufacturer's Exporting Laser Solutions to the World

Bristow Laser Systems would like to announce the sale of the first 6 metre x 2 metre 7000 watt "**Vantage**" system into Europe. The system has been purchased by DeBruyn Industries, Netherlands. The system has been sold into the heartland of laser cutting systems, and was sold on its technical merits over locally sourced competitors. Along with this success, BLS has appointed MASKINGRUPPEN, Denmark as new European distributors.

The new "**Vantage**"/**PRC 7000** watt laser offers unprecedented cutting capacities and process feedrates. While thicker cutting offers advantages, the system allows thinner materials to be processed at feedrates faster than ever before, thus offering increased return on investment.

Available with various cutting table sizes and materials handling options the new "Vantage" range with PRC 7000 can put your company at the forefront of laser technology.
